

Enzo Pendant Technical Guide

Introduction

Our most popular personal alarm pendant, Enzo, is a lightweight device that can be worn on the wrist or around the neck. It has a long battery life and is waterproof and shockproof.

Enzo has two-way data communication which means that the user receives a confirmation that the alarm has been received at our contact centre. When the button is pressed, the LED indicator lights up. When the alarm base unit receives the signal from the button, this is confirmed by the indicator light changing color.

Our unique Easy Press Concept (EPC) accessory makes it easy for users with restricted movement to call for assistance.

Enzo is compatible with all of Careium's current alarm base units: CareIP®Mobile, CareMobile, Eliza & Eliza S.

Description of functions

The Enzo personal alarm pendant can be worn around the wrist or around the neck. The Easy press accessory works in both positions. You can easily switch between the different accessories.

- LED indicates transmission and battery status.
- Range covers a normal house or flat.
- Confirmation of successful alarm transmission.
- Lithium battery for long life, up to 5 years.
- Automatic monitoring of battery and function. Careium is alerted in the event of a fault.
- Battery replaceable by authorised personnel.
- Adjustable neck strap.
