

Silver Line II Push/Pull Hand Controls

Mechanical Push/Pull Accelerator & Brake

Brig-Ayd's Silver Line II Hand Controls move the function of the pedals to a convenient push/pull handle, behind the steering wheel, for your right hand.

Highly adjustable position to suit the driver's requirements

The Silver Line II allows for easy and controlled acceleration and braking via the adjustable handle fitted for your right hand.

Mechanical hand controls are best paired with a steering aid, such as a quick detach steering ball or even a remote control, to give you easy access to various secondary vehicle functions such as indicators and lights.

Multiple handle versions are available including options with indicators and secondary controls.

Over the last 45 years, Brig-Ayd Controls have developed an innovative catalogue of driving solutions including car hand controls that can be tailored to your unique requirements.

- Enables users with partial or limited use of their legs to drive by transferring acceleration & braking to their right hand
- Different handle styles available
- Versions available with secondary controls for various functions
- Ideal for use in conjunction with a Steering Aid
