

For those with significantly reduced grip strength, the Brig-Ayd Tetra Grip engages with your wrist to help steer safely and comfortably.

Adjustable wrist supports to suit the specific driver's needs

A specialised alternative to a traditional steering aid, the Brig-Ayd Tetra Grip improves upon a peg grip by engaging with your wrist, affording you greater control of the wheel.

The Tetra Grip allows you to continuously turn the wheel without removing your hand, making it ideal for drivers with limited grip strength.

Whilst a Steering Aid can be used independently, they are often essential when hand controls are fitted to a car. They enable you to steer with one hand while operating the acceleration and brake with the other.

You can quickly detach the Tetra Grip when required for yourself or other drivers.

- Tetra Grip engages with your wrist and hand to support steering
- Can be positioned wherever suits you on the steering wheel
- Ideal for use in conjunction with Hand Controls
- Quick Release Design ideal for multiple drivers

LOADING & STOWAGE

Make easy work of loading and unloading a wheelchair, mobility scooter or powerchair into your vehicle with our loading and stowage systems. All at the touch of a button. Whether you require car hoists or wheelchair roof boxes, we have got you covered.

DRIVING AIDS

Regain and retain your independence with our colossal range of driving adaptations tailored to you and your vehicle, including mechanical hand controls, electronic accelerators, left foot pedals, pedal guards, remote control devices, steering aids, and much more.

EASY VEHICLE ACCESS

Get in and out of your vehicle safely and easily with our specialised range of accessibility adaptations for drivers and passengers with reduced mobility. We can aid your transfer from a wheelchair, scooter, powerchair or even from standing, with swivel seats, transfer plates, and person hoists.
