

# evo+

Environmental Control Device

evo+ is setting new standards for home automation with its ability to turn any iPhone, iPad or iPod Touch into a universal environmental control device.

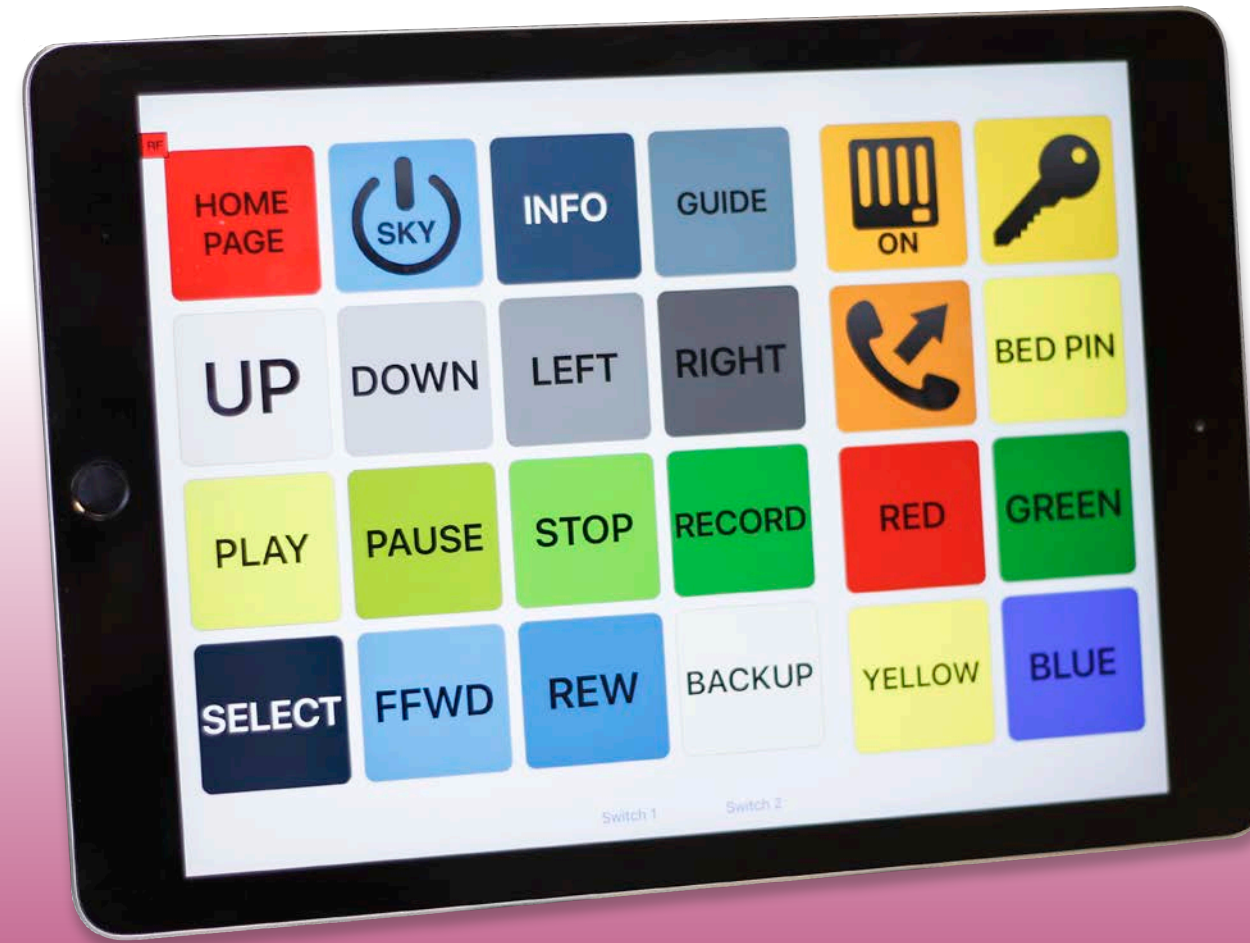

Operated via touch screen or input switches, the evo+ is designed with the individual client in mind as it provides independence to anyone who requires assistance in automating home devices.

The new design features enable clients to personalise their home screens to access their most used icons, and adjust image sizes for hassle-free use. Along with seamless integration with other peripherals around the home, automatic update reminders and an improved IP intercom system provide a reliable and stable home control solution for any client.

# evo+

## Features and Benefits

### Aesthetics

Enhanced graphics ensure clear differentiation between icon function, and improved visibility for assistive technology clients.

### Access options

evo+ can be accessed through touch screen or the use of a remote switch, so clients can navigate the bold icons easily and take control in their homes.

### Customisable icons

Using the Apple device pages, clients can select and prioritise icons based on their most used functions, ensuring they are clearly visible and easy to find. To further personalise the app, clients can pick their favourite colour theme from the full spectrum, and resize icons to increase their visibility and ease of access.

### iOS compatible

Compatible with all iOS devices across iPhone, iPod and iPad ranges to offer continuous flexibility for clients.

### Seamless integration

evo+ integrates seamlessly with other peripherals around the home to create a full home control solution, and with features such as improved IP intercom and dozens of app configuration options, it is a reliable partner in the home for clients. See overleaf for the full compatibility of evo+.

### Reliable communication aid

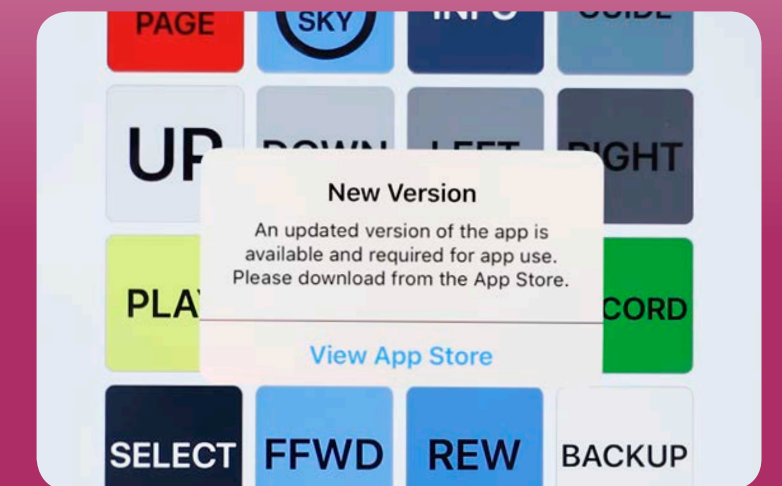

evo+ can be used as a basic communication tool using frequently used, pre-recorded phrases.

### Simple & personalised setup

A Steeper engineer can deliver and install a basic evo+ system in just 60 minutes, and will ensure that the app is configured according to the individual's specific daily requirements and preferences.

### Enhanced system

The enhanced evo+ app offers improved stability and reliability, as it is fully integrated within the iOS system. Whenever a new iOS update is launched, clients will simply be prompted to update the evo+ app ensuring it is fully functional.

# What can I control with evo+?

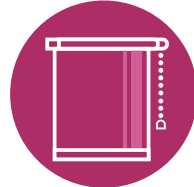

The evo+ is designed to enable clients full control over automating their home devices, and with a variety of solutions available, our assistive technology engineers can help create a bespoke solution for every client. The ability to move freely around the home, communicate quickly, and adjust room conditions for comfort, allows individuals to spend more time embracing their independence and less time on daily tasks. See below the variety of peripherals that can be integrated with the evo+ app:

Wall/ceiling lights

Intercoms

Curtains/blinds

Profiling beds/  
chairs

Window openers

Automatic doors

Plug-in appliances  
e.g. lamps, fans, heaters

Home entertainment  
e.g. TV, DVD players

Telephones/pagers

A client's current assistive technology equipment can also be easily configured by our engineers to create a complete environmental control solution that runs throughout the home. See the table below as to which devices can be used in conjunction with standard equipment, to create a safe and secure home individuals can regain their independence within:

evo+		
	RF Bridge with Quad appliance	Minibirt
