

Steering Ball

Quick Release Steering Ball

A Steering Ball is the most popular style of steering aid, they allow drivers to steer safely and comfortably with one hand.

Quick Release Design ideal for multiple drivers

The Brig-Ayd Steering Ball allows you to continuously turn the wheel without removing your hand, making it ideal for steering with one hand.

Whilst a Steering Ball can be used independently, they are often essential when hand controls are fitted to a car. They enable you to steer with one hand while operating the acceleration and brake with the other.

You can quickly detach the steering ball when required for yourself or other drivers.

Over the last 45 years, Brig-Ayd Controls have developed an innovative catalogue of driving solutions including car hand controls that can be tailored to your unique requirements.

- Patented one bolt design enables it to fit closer to the spokes of the wheel
- Can be positioned wherever suits you on the steering wheel
- Ball shape allows for a comfortable but firm grip
- Ideal for use in conjunction with Hand Controls

LOADING & STOWAGE

Make easy work of loading and unloading a wheelchair, mobility scooter or powerchair into your vehicle with our loading and stowage systems. All at the touch of a button. Whether you require car hoists or wheelchair roof boxes, we have got you covered.

DRIVING AIDS

Regain and retain your independence with our colossal range of driving adaptations tailored to you and your vehicle, including mechanical hand controls, electronic accelerators, left foot pedals, pedal guards, remote control devices, steering aids, and much more.

EASY VEHICLE ACCESS

Get in and out of your vehicle safely and easily with our specialised range of accessibility adaptations for drivers and passengers with reduced mobility. We can aid your transfer from a wheelchair, scooter, powerchair or even from standing, with swivel seats, transfer plates, and person hoists.
