

Since 1962 Ropox has developed and manufactured products assisting people with reduced functional ability to live their lives independent of others. Today Ropox is among the market leaders in this field in Denmark and worldwide

“Better ways to better days”

Better ways to better days. This is the basic philosophy of Ropox. We therefore consider it important to involve the end-users in our development of new products. Products of designs, functionality and flexibility that offer advantages for everybody. However, it goes without saying that now – as ever – we give top priority to solutions, which facilitate the daily activities of people with disabilities and their helpers.

Based on our experience in designing products we also considered it important for VISION to fit beautifully into the many different interiors of communal and private homes.

VISION
by ropox

Welcome to the world of VISION
– The new range of unique height
adjustable Ropox tables.

VISION is the new range of modern height adjustable Ropox tables. In our opinion a product must be functional and beautiful – no matter who is going to use it. That's what we call VISION.

VISION comprises tables and accessories for a variety of activities. The tables are available in sizes to suit an individual or several people sharing. Colours enhance motivation and VISION is therefore available in vivid colours as well as the more neutral shades.

The beautiful and functional VISION design was developed for people moving around with or without help. For children and adults, who enjoy reading, using a computer or who just love to play. In short, for everybody who wants freedom to pursue their activities.

Bright colours for the children

VISION is available in colours adding inspiration to daily activities.

The table is easily adjustable to meet a variety of requirements both now and in the future, as it "rises" with the child. The high degree of functionality and the beautiful design make the table a favourite in nurseries, schools, colleges and at home.

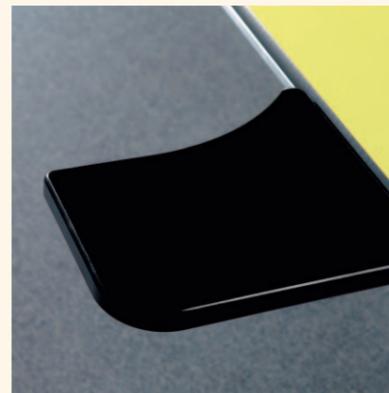

Adaptable to suit any activity

VISION may be adjusted to suit the required situation. The photo shows how the tabletop may be tilted to ensure proper working posture. All tilting tabletops have steel plates so the MagRule can support items at the optimal height.

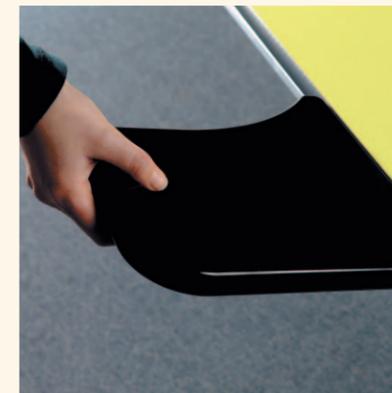

Operating the computer with effortless ease

For wheelchair users, who want to operate a computer, VISION is ideal, as the user may get close to the table with mouse and keyboard within easy reach. The arm support may be clipped on and off, as required.

Extra support

The arm support just clips into place to provide extra support exactly where it is needed.

Flexibility at school

At school many age groups and many special situations make different demands on the "workplace". Apart from being adjustable in height, this VISION tabletop, or part of it, is tiltable.

Integrated castors

All VISION tables are provided with two inconspicuous castors at the back, making it easy to draw the table closer. Plain feet at the front give the tables extra stability.

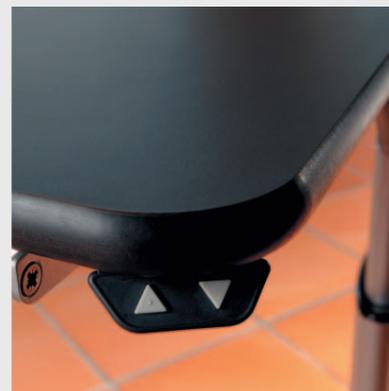

Meetings, conferences and education

VISION fits in everywhere. The tables are available in different sizes and colours matching the individual applications.

Optimum working posture
VISION is manually or electrically adjustable to suit the individual user, thus ensuring the best working posture.

Electrical adjustment
Through a light pressure on the control switch the electrical height adjustment will be activated.

Manually adjustable tables may be electrically operated
The table is always delivered with a handle but is also available with a battery powered control unit for easy and quick adjustment of the table.

VISION is the rendezvous
Everybody may get together around the table, as it may be adjusted to suit specific activities and individual requirements. The design is modern and suitable for all conference rooms.

Comfort

This is the table that meets all needs, be it a training table in therapy, a reading table, computer table or a workspace in general. For all people, regardless of their mobility. They are able to sit comfortably at the table, and the arm support will help provide a comfortable and balanced posture. The unique design with soft rounded corners provides ideal working conditions for the user.

Optimum working conditions

VISION is ideal in situations when the patient must be seated securely and comfortably at the table. At the same time it provides optimum working conditions for the therapist training the patient.

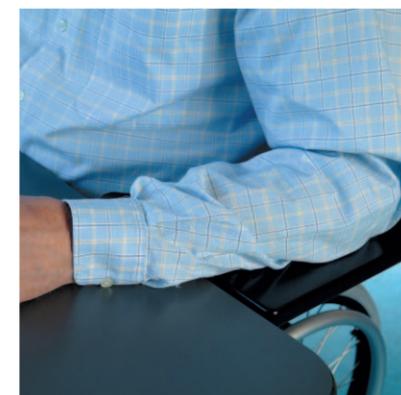

Get a grasp of your reading material

VISION is available with the unique MagRule, keeping the reading material in place.

Close contact

Even when using the arm support you can still get close to the table.

Comfortable reading

The table makes reading a "relaxed" experience, as the tiltable tabletop brings the text closer to your eyes. All tilting tabletops have steel plates so that magnets can be used directly on the tabletop.

At work, at home

VISION is adjustable to ensure the ideal workplace – also at home.

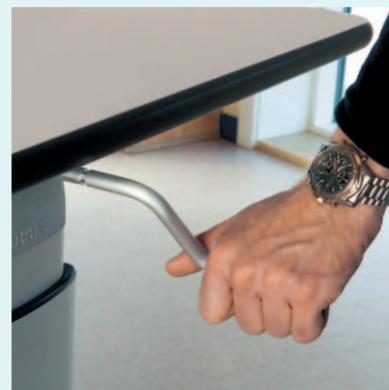

Get together

We all need socialising and spending time together in pleasant surroundings, irrespective of our degree of mobility. VISION provides plenty of room for common activities, and the design with soft rounded corners both on the tabletop and frame fits any domestic or communal environment.

The common table for individualists
 At the VISION table everybody will sit comfortably – whether disabled or not. The arm support may be clipped on or off as required.

Easy adjustment
 VISION is easily and quickly adjustable, manually or electrically.

Rounded corners
 VISION has soft, rounded corners avoiding the danger of hitting sharp edges when moving round the table.

Mutual pleasure
 With the new VISION we have developed a table suiting everybody – every room – every need. There's room for everybody!
