

## Innovative Nighttime Support for Individuals, Caregivers and Families

*"I have had the SAMi monitor for over a year. I never would have imagined that I would get peace of mind at night with my son's seizures. We have tried many other monitors and none have worked for him. I love the fact that not only can you adjust the sensitivity, but you can also adjust how long before it alerts you. I would recommend this monitor to anyone with a loved one who suffers with seizures."*  
- Stacey in Colorado

*"Your instruction manual was so easy to follow... I had no trouble with the installation."*  
- Kate in Australia

*"I am so excited... the doctor was so impressed!"* – Susan in Florida

*"My son has had two seizures in the last 24 hours. Without this camera we wouldn't have known they were going on. The recordings have helped our son get proper medical attention through use of the video capture whilst also allowing us to concentrate on him during a seizure rather than trying to film it."*  
- Kirsty in the U.K.

*"...love the SAMi camera! We feel so much more empowered than just with the baby monitor we were using."*  
- Shelly in Illinois

For more information on SAMi or to purchase please visit our website at:

Nighttime Movement Monitoring  
and Recording for Home Use

# Alert, View, and Record

SAMi is a sleep activity monitor for caregivers and individuals who need to carefully watch for abnormal movements at night. The SAMi app runs on your iOS device (iPhone, iPod Touch or iPad) and uses a high definition night vision video camera to monitor sleep.

The app analyzes the video for activity. When an unusual event is detected an alarm is sounded, followed by live audio and video. All video and audio can be recorded for later review and is easily shared with your healthcare professional.

## \$399

- Free App
- Free Priority 2-3 Day Shipping (in US)
- No Subscription Fees
- Return Within 45 Days for Full Refund\*

We created SAMi to address a very personal need for a system that would:

- Alert us to our child's abnormal movements with a loud, unmissable alarm.
- Not disturb us with our child's normal tossing and turning during sleep.
- Provide us with a way to quickly see and hear what is happening.
- Make recordings to share with our doctors.

Flexible Alarm	Independent control over sensitivity, motion duration, and volume
Smart Edge™	Reduces false alarms by ignoring motion that doesn't start in the center
Clock Mode	Display a clock while monitoring (for privacy and less distraction)
Live Video	768 x 432 resolution color (B&W in IR mode)
Night Vision	28 IR illuminators for high quality image even in complete darkness
Remote Audio	AAC and noise reduction, can be always on or only on after alarm
HD Recordings	1280x720 resolution, H.264 compression, playable on any computer
Motion Triggered	Record continuously or only on motion (recommended)
Record Schedule	4 programmable on/off day/times
Storage	32GB on camera (up to 60 hrs.), unlimited on iOS device
Recording Manager	Quickly find, view, organize, email and delete recordings
Network	Ethernet and WiFi (IEEE 802.11b/g/n) 2.4GHz
Security	WEP (64/128 bit), WPA-PSK (AES/TKIP), WPA2-PSK (AES/TKIP)

\*INCLUDED: The SAMi-3 Camera • Camera Bracket/Stand with 3M Command Strips for damage free wall mounting • Universal voltage AC power adapter • US/UK/EU/AU Mains Plug Adapters • Ethernet cable • 32GB Class 10 microSD card with SD card Adapter • Accessory Kit with Wire Clips, Rubber Feet, and Wall Anchors • Installation Instructions

Return refund does not include the cost of return shipping, expedited shipping or international shipping.
